Criteria for Inclusion of New Data

> Robust

 Within the accepted uncertainty, the value is unlikely to change if there was repetition of the original measurement programme or modelling activity.

> Applicable

An emission factor can only be applicable if the source and its mix of technology, operating and environmental conditions and abatement and control technologies under which the emission factor was measured or modeled are clear and allow the user to see how it can be applied.
 "Properties"

Documented

 Access information to the original technical reference must be provided to evaluate the robustness and applicability as described above.

Robustness

- Specific issues concerning robustness are, e.g.:
 - Are the measurement techniques including raw data validated and/or verified?
 - Are the modelling techniques including supporting data validated and/or verified?
 - Is the conversion (if any) from model assumptions or measurement conditions to annual or other forms of emission factors or other parameters sufficiently explained and justified?
 - Is an uncertainty assessment on the emission factor or other parameter presented?
- Sufficient documentation (provision of access to technical references) will help.

Robustness

Emission Factor Report (ID: 2136	25)		
Administrative information			
Data Provider:	GIO/CGER/NIES		
Data Provider Country:	Japan		
Data Provider Contact:	aizawa.tomoyuki@nies.go.jp		
Date calculated:	2005/6/25		
Date submitted to EFDB by Data	0000 00 07 00 05 57		
Provider:	2006-03-27 20:05:57		
Date posted to EFDB by IPCC:	Unknown		
Technical information			
Gas:	NITROUS OXIDE		
Usage/Review information			
Type of parameter:	Measured		
Measurement technique/standard:	The N2O decomposition ratio (same meaning as "destruction Online infrared gas analyzers and flow meters were used to		
•	Online infrared gas analyzers and flow meters were used to		
	continuously measure the concentrations and the flow rates of		
	N2O entering and exiting the decomposition equipment. The		
Periodicity of measurement:	instantaneous value of a measurement was recorded every few		
	seconds. The instaneous values recorded data were used for		
	N2O emission calculations.		
	The independent auditing organization certified in August, 2005		
External quality control performed:	that emission estimates were conducted properly and the data		
	obtained and verified from the investigation were valid and		
Date of measurement:	2004-4-1 to 2005-4-1		
	As 0.03% of the generated N2O gas escapes through the online		
	infrared gas analyzer and during the first crystallization process,		
Comments from the data provider:	the remaining 99.97% is fed into decomposition equipment. In		
	addition, 99.97% of the N2O fed is destroyed. Therefore, the		
	overall destruction factor is 99.94% (= 0.9997 * 0.9997).

Applicability – "properties" are crucial

- "Properties" define what EFDB users might see as important information in order to judge whether the data are suitable for their inventories.
- Five types of "properties"
 - Technologies/Practices
 - Parameters/Conditions
 - Region/Regional Conditions
 - Abatement/Control Technologies
 - Others

Applicability - "properties" are crucial

Emission Factor Report (ID: 51362	6)			
Administrative information				
Data Provider:	Xiaoquan Zhang			
Data Provider Country:	China			
Data Provider Contact:	xiaoquan@caf.ac.cn			
Date calculated:	2006-06-28			
Date submitted to EFDB by Data	006-07-11 19:33:14			
Provider:	2000-07-11 19.55.14			
Date posted to EFDB by IPCC:	2006-09-08 16:02:18			
Technical information				
Gas:	CARBON DIOXIDE			
IPCC 1996 Source/Sink Category:	Land-Use Change & Forestry (5) -> Changes in Forest and Other Woody Biomass Stocks (5A) -> Tropical Forests (5A1) -> Plantations (5A1g)			
IPCC 2006 Source/Sink Category:	Agriculture Forestry and Other Land Use (3) -> Land (3 B)			
Properties				
Technologies/Practices:	The rotation is around 25 years. Thinning is usually done. Other management activities include fertilizer application.			
Abatement/Control Technologies:	Other activities include pest and disease control, and fire control			
Parameters/Conditions:	Tree species: Chinese fir (Cunninghamia lanceolata); age ranges from 3 to 60 year-old.			
Region/Regional Conditions:	Country: China; Region: Southern China; Climate zone: subtropical, very moist climate; Mean annual temperature is 17°C; Mean annual precipitation is 1500mm.			
Others:	tree height ranges from 2 to 28.1 meter, DBH from 2 to 48.1 cm			
Description:	Biomass Expansion Factor (BEF2) converting volumes of extracted rounwood to total			
Value:	1.66 (1.21 - 2.97)			
Unit:	dimensionless (dimensionless)			
Value in common units:	,			
Common unit:				
Equation:	Equations 3.2.3, 3.2.7, and 3.2.8 in IPCC Good Practice Guidance for Land Use, Land-Use Change and Forestry			
IPCC Worksheet:	Worksheet FL-1a of IPCC GPG-LULUCF			
Source of data:	compiled from Science literature (calculated from 121 studies from 30 published articles in

Documentation

- Sufficient information on technical references
 - scientific or technical publication in an internationally available journal
 - report or book with an ISBN number
- URL where the technical references are available will be quite helpful.
