

# IPCC Inventory Software - Users' Guidebooks (Energy Sector, Land Representation)

UNFCCC COP28 – Dubai, UAE  
6 December 2023 – IPCC Pavilion  
Pavel Shermanau – IPCC TFI TSU

# User Manual

- In addition to the User Manual, IPCC TFI TSU is producing a series of Guidebooks to support the use of the Software.
- The User Manual can be accessed from the Tab <Help> of the Software, and it is also published in the IPCC TFI web-site: [www.ipcc-nggip.iges.or.jp/software/index.html](http://www.ipcc-nggip.iges.or.jp/software/index.html)

The screenshot shows the IPCC Inventory Software - TSU - [Worksheets] interface. The 'Help' menu is open, and the 'PDF Manual' option is highlighted. The main window displays a table of fuel consumption data for various regions and plants.

Subdivision	Fuel	Consumption Unit	Consumption (Mass, Volume or Energy Unit)	Conversion Factor (TJ/Unit) (NCV)	Total consumption (TJ)
S	F	U	C	CF	TC = C * CF
Region A	Crude Oil	TJ	500	1	500
Region B	Crude Oil	Gg (Auto CF)	50	42.3	2115
Region C	Lignite	Gg (Auto CF)	1000	11.9	11900
Region D - Plant W	Natural Gas - Hydrogen (20%)	Gg (Auto CF)	3000	55	165000
Region D - Plant X	Oil Shale / Tar Sands	Gg (Auto CF)	2000	8.9	17800
Region D - Plant Y	Natural Gas (Dry)	Gg (Auto CF)	700	48	33600
Total					230915

- Unofficial translations in Arabic and French of the User Manual and of the Software are published in IPCC TFI web-site for *(kindly provided by Prof. Sidaty Ould Dah)*

# Users' Guidebooks

## Aim

- To simulate the use of the Software for each inventory category, and to provide the most relevant references to good practice from the *2006 IPCC Guidelines*, its *Wetlands Supplement*, and its *2019 Refinement* (only where needed)

## Structure

- For each inventory category:
  - General information on the category and gas(es) covered
  - Relevant IPCC equations
  - Description of calculation worksheets in the Software
  - Workflow for AD and EF selection and input
  - Results

**NOTE** Software users SHALL be familiar with the *2006 IPCC Guidelines* and read the *User Manual* before going through the Guidebook.

# Users' Guidebooks - Overview

## Sectoral Guidebooks

As the IPCC Inventory Software is still subject to improvements within the work on interoperability, the development of sectoral guidebooks is accordingly affected.

Sector	Software	Guidebook
Energy	Developed	Under publication (TFI website)
IPPU	Under Development	Under development
AFOLU	Under Development	Land Representation – uploaded (TFI website)
		Under development
Waste	Developed	Under development
Interoperability	Under Development	Under development

### Work in progress:

- ✓ versions published are periodically revised (*versions' numbering to be checked by users*)
- ✓ users' feedback is a key to support Guidebooks' development

# Energy Guidebook

- Around 140 pages, it can be downloaded from the IPCC TFI web-site: [www.ipcc-nggip.iges.or.jp/software/index.html](http://www.ipcc-nggip.iges.or.jp/software/index.html)
- A work-in-progress document, given it will be periodically reviewed by IPCC TFI TSU with the aim to increase the amount of information and to enhance its usefulness (*real case examples, correction of any errors and further enhancement of the software*).
- Users are therefore required to check periodically the version of the Energy guidebook published on the IPCC TFI website

# General Structure

- Introduction
- General Energy Issues
  - List of Categories
  - Fuel Manager
  - Use of Multiple Tiers
  - Reporting Subdivisions
  - Uncertainty and Time Series
- Sectoral Guidance
  - 1A Stationary Combustion
  - 1B Fugitive Emissions
  - 1C Carbon Dioxide Transport and Storage
  - Reference Approach
- Annex I: Mapping between the IPCC Inventory Software and the UNFCCC CRT Reporting Tool

*The main part:  
Includes all categories of  
Energy sector*

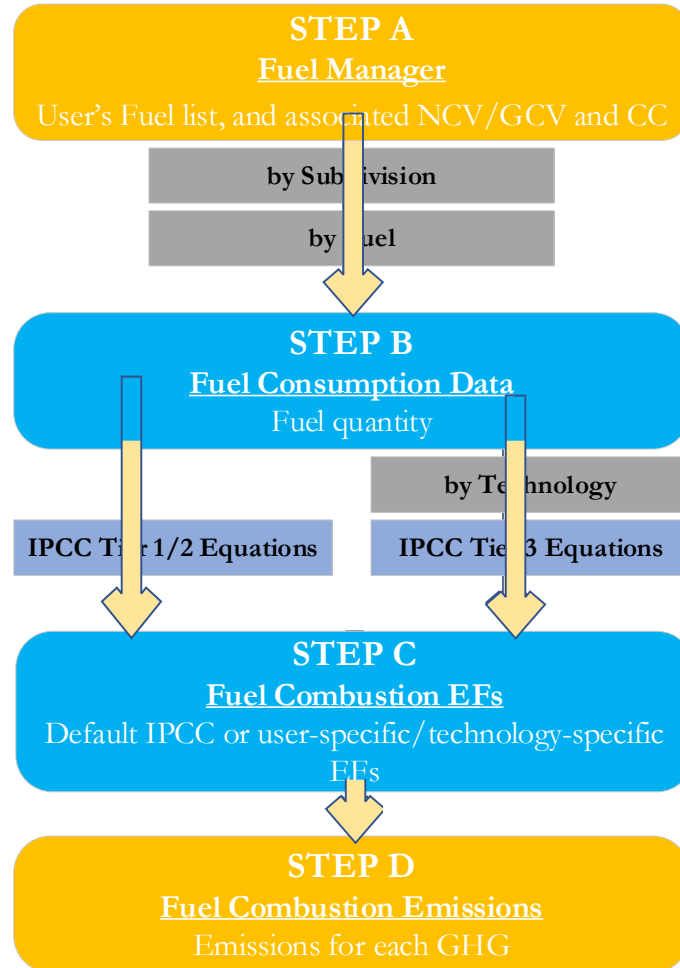

# Categories' structure

- **Information**
  - a short information on important issues regarding the IPCC Guidance, Tiers/methods, categories, etc.
- **GHGs**
  - indication of GHGs emitted in each category
- **IPCC Equations**
  - a list of relevant equations from the IPCC Guidelines
- **Software Worksheets**
  - a short description of the Software worksheets
- **Category Flowchart**
  - a schematical diagram of workflow with category's worksheets
- **Activity Data Input**
  - guidance on input of AD in category's worksheets
- **Emission Factor Input**
  - guidance on input of EFs in category's worksheets
- **Results**
  - any issues related to the results of estimation (representation in the Software worksheets and Reporting Tables)

*Step-by-step or cookbook approach*

# Example of Flowchart (1)

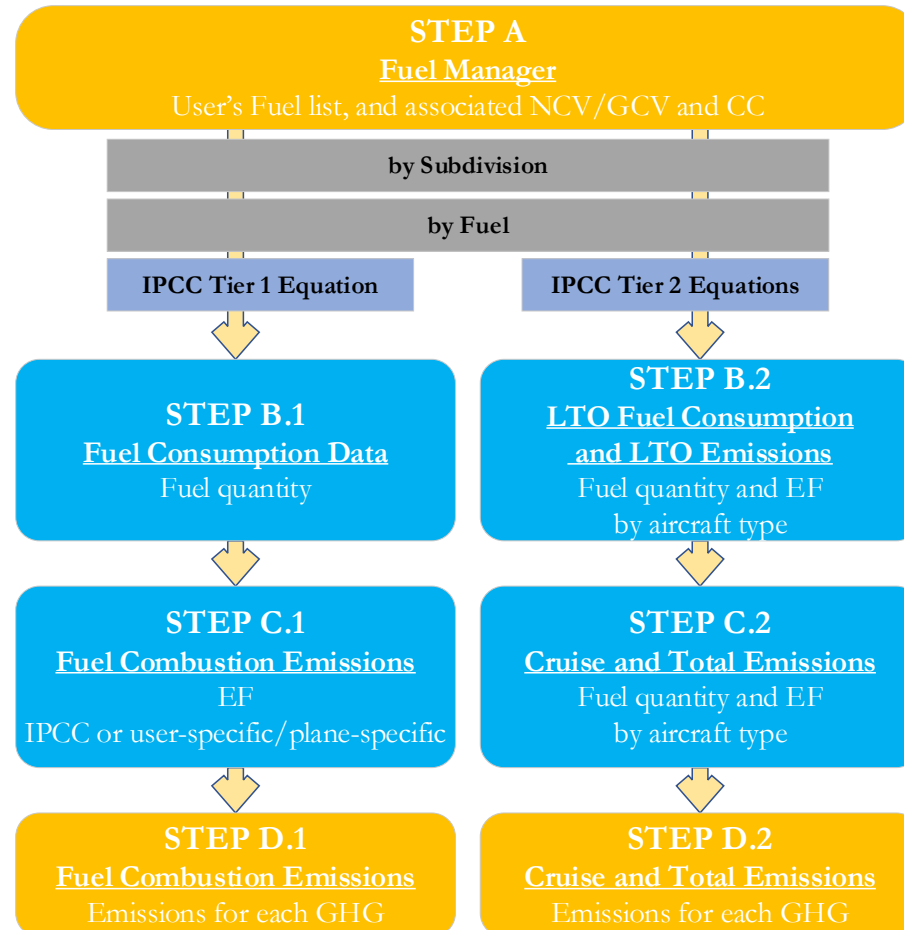

- 1.A - Stationary Combustion Source Categories (1.A.1, 1.A.2, 1.A.4 and 1.A.5)

# Example of Flowchart (2)

- 1.A.3.a - Civil Aviation

# Fuel Manager (1)

- Before entering data in Energy worksheets to estimate emissions from 1.A Fuel Combustion Activities, the **Fuel Manager** shall be populated with all relevant data that will be subsequently used (automatically appear) in Energy worksheets

The screenshot shows the IPCC Inventory Software interface. The 'Administrate' menu is open, and the 'Energy' option is selected, which has opened a sub-menu where 'Fuel Manager' is highlighted. An orange box highlights the path from 'Administrate' to 'Energy' to 'Fuel Manager'. The background shows a worksheet for 'Fuel Consumption Data' with a table of fuel consumption data.

Subdivision	Fuel	Consumption Unit	Consumption (Mass, Volume or Energy Unit)	Conversion Factor (TJ/Unit) (NCV)	Total consumption (TJ)
S	F	U	C	CF	TC = C * CF
Region A	Crude Oil	TJ	500	1	500
Region B	Crude Oil	Gg (Auto CF)	50	42.3	2115
Region C	Lignite	Gg (Auto CF)	1000	11.9	11900
Region D - Plant W	Natural Gas + Hydrogen (20%)	Gg (Auto CF)	3000	55	165000
Region D - Plant X	Oil Shale / Tar Sands	Gg (Auto CF)	2000	8.9	17800
Region D - Plant Y	Natural Gas (Dry)	Gg (Auto CF)	700	48	33600
Total					230915

Fuel Manager

# Fuel Manager (2)

- The Fuel Manager contains data on carbon content and calorific value for each fuel.
- All IPCC default fuels are listed in. In addition, users can enter user-specific fuels together with relevant data required by the Fuel Manager (carbon content and calorific value).

*Default IPCC fuels (embedded - in grey) and Country-specific fuels (manual input - in white)*

Fuel Manager

# Activity Data and Emission Factor Input

Energy Sector Users' Guidebook

IPCC Inventory Software

## Activity data input

The 2006 IPCC Guidelines, Sections 1.4.1.2 and 1.4.1.3, contain information on how to collect and use energy statistics data. Further information on the choice of AD for stationary combustion can be found in Section 2.3.3.

Fuel consumption data in mass or volume units shall first be converted into the energy content of these fuels in Terajoule units (TJ). The GCV/NCV are used to convert  $G_g$  of fuels into TJ (IPCC default values for NCV are in Table 1.2). Other units may be entered into the Fuel Consumption Data worksheet -e.g. British Thermal Units (BTUs)-. However, when alternative units are used, the column for GCV/NCV becomes blank and the user shall enter user-defined conversion factor (TJ/unit).

Thus, for the relevant source-category:

As Starting step, users enter in the Fuel Manager all user-specific fuels to be reported in the NGHGI; and for each fuel listed in the Fuel Manager the calorific Value and the carbon content are entered or, for IPCC default fuels are selected from the dropdown menu.

Second, users compile the worksheet Fuel Consumption Data either with a single row of data for the entire category, with its univocal name/code entered in Column |S| [e.g. "country name" or "unspecified" as selected from the dropdown menu], or with subnational aggregations, and for each of those the univocal name/code entered in Column |S|:

Example: Single Subdivision (unspecified)

Subdivision	Fuel	Consumption Unit	Conversion Factor (Manual CF)	Conversion Factor (IPCC)	Total Consumption (TJ)
Unspecified	Petroleum	Gg (Man CF)	114	26.1	2925
Unspecified	Coal	Gg (Man CF)	400	26.8	1060

Example: Multiple Subdivisions

Subdivision	Fuel	Consumption Unit	Conversion Factor (Manual CF)	Conversion Factor (IPCC)	Total Consumption (TJ)
...	...	...	...	...	...
...	...	...	...	...	...
...	...	...	...	...	...

Then, for each subdivision in Column |S| data are entered in worksheet Fuel Consumption Data row by row as it follows:

- Column |F|: select each fuel used from the drop-down menu (1 row for each fuel).  
*Note that fuels shown in the dropdown menu are those listed in the Fuel Manager.*  
*Note that there is no limit to the number of combinations of subdivision/fuel that can be entered in the Software; the larger the number, the more accurate and precise the estimates are.*
- Column |U|: enter unit of fuel consumption data (e.g. Gg, TJ, m<sup>3</sup>). To enter a user-specific unit (e.g. m<sup>3</sup>) select  $G_g$  (Manual CF) from the dropdown menu and overwrite  $G_g$  with the user-specific unit.
- Column |C|: enter amount of fuel consumed.
- Column |CF|: enter conversion factor to convert the consumption unit to energy unit (TJ).  
*Note that where  $G_g$  of fuel are converted to TJ, the NCV/GCV is sourced from the Fuel Manager and compiled by the Software as the conversion factor, while if the consumption unit is TJ the Software compiles the conversion factor cell with the value 1. Where other units are applied (e.g. m<sup>3</sup>) the user shall enter relevant conversion factor here.*

## AD and EF input

Energy guidebook provides a detailed structured description for input of AD and EFs for:

- each column
- each worksheet
- each category

# Guide to Land Representation

Guide to Land Representation

IPCC Inventory Software (TSU IPCC TFI)

## IPCC Inventory Software Guide to Land Representation

*ver 1.1 as of 6 September 2023*

This Guide was prepared by the Technical Support Unit (TSU) of the IPCC Task Force on National Greenhouse Gas Inventories (TFI) to help users of the IPCC Inventory Software.

It has not been subject to formal IPCC review processes.

Page 1 of 80

- Land Representation is one of the most important issues in National GHG Inventories.
- The Guide to Land Representation in the IPCC Inventory Software provides a detailed guidance (*around 80 pages*) on how to make the first step in AFOLU inventory, particularly how to make inputs in two Managers:
  - Land Use Manager
  - Land Representation Manager
- The Guide can be downloaded from the IPCC TFI website: [www.ipcc-nggip.iges.or.jp/software/index.html](http://www.ipcc-nggip.iges.or.jp/software/index.html)

ipcc

INTERGOVERNMENTAL PANEL ON climate change

# AFOLU - Managers

○ Like with all Software Managers, in AFOLU Sector – users before working on sectoral worksheets need to populate three AFOLU Managers:

- Land Use Manager
- Land Representation Manager
- Livestock Manager

*Guide to Land Representation*

The screenshot shows the IPCC Inventory Software interface. The 'Administrate' menu is open, and the 'AFOLU' option is selected, which has opened a sub-menu containing 'Land Use Manager', 'Land Representation Manager', and 'Livestock Manager'. The background shows a worksheet for 'SOM Organic Rewetted' with various data fields and equations.

Land use category			Equation 2.10						Equation 2.9			
Land unit code	Land use during reporting year	National statistics or international data sources	Area (ha)	Average net annual increment of growing stock (m3 / ha / yr)	Biomass expansion factor for conversion of annual net increment to above-ground biomass increment	Basic wood density (t d.m. / m3 fresh volume)	Biomass conversion and expansion factor for increment (t d.m. / m3 wood volume)	Average annual above-ground biomass growth (tonnes d.m. / (ha * yr))	Ratio of below-ground biomass to above-ground biomass (t bg d.m. / t ag d.m.)	Average annual biomass growth above- and below-ground (tonnes d.m. / (ha * yr))	Carbon fraction of dry matter (tonnes C / tonne d.m.)	Annual increase in biomass carbon stocks due to biomass growth (tonnes C / yr)

Land Use Manager  
Land Representation Manager

# Land Use Manager

- Land Use Manager allows to characterize all land types within the **Six IPCC land use categories**, further stratified in 12 sub-categories
- Different land use categories have a different set of parameters
- Guidebook provides a step-by-step guidance on what information needs to be input to characterize land types in each land use category

**Land Use Manager**

Land use structure

- Forest Land
  - Managed Forest Land
  - Unmanaged Forest Land
- Cropland
  - Cropland Annual Crops
  - Cropland Perennial Crops
- Grassland
  - Managed Grassland
  - Unmanaged Grassland
- Wetlands
  - Managed Wetlands
  - Unmanaged Wetlands
- Settlements
  - Settlements (Treed)
  - Settlements (Other)
- Other Land
  - Managed Other Land
  - Unmanaged Other Land

Land use subdivision - common parameters

Land use subdivision name: Managed Forest

Soil Type: High Activity Clay Mineral

Soil Status: Natural

Country/Territory: Japan

Continent: Asia

Climate Region: Cool Temperate Moist

It is not possible to change some of the parameters since subdivision is already being used in Land Representation Manager

Land use subdivision - Managed Forest Land specific parameters

Ecological zone: Temperate continental forest

Species: Other Broadleaf

Natural Forest  Plantation

Abandoned managed land

Land mass: Continental

Age class (yr): >20 y

Above-ground biomass stock (t d.m. / ha): 112.000

Above-ground biomass growth (G) (t d.m. / ha / yr): 0.000

Ratio of below-ground biomass to above-ground biomass (R) (t root d.m. / t shoot d.m.): 0.230

Biomass carbon fraction (t C / t d.m.): 0.480

Growing stock level (V) (m<sup>3</sup> / ha): 41-100

Average net annual increment of growing stock (lv) (m<sup>3</sup> / ha / yr):

Biomass conversion and expansion factor for increment (BCEF) (t d.m. / m<sup>3</sup> wood volume): Specified 0.900

Biomass conversion and expansion factor for standing stock (BCEFs) (t d.m. / m<sup>3</sup> wood volume): Specified 1.400

Biomass conversion and expansion factor for wood and fuelwood removal (BCEFr) (t d.m. / m<sup>3</sup> wood volume): Specified 1.550

Basic wood density (D) (t d.m. / m<sup>3</sup> fresh volume):

Biomass expansion factor for conversion of annual net increment to above-ground biomass increment (BEF1):

Biomass expansion factor for conversion of merchantable volume to above-ground biomass (BEF2):

Reference soil organic carbon stock (SOCref) (t C / ha): 95.000

Relative C stock change factors

Land use (FLU): 1.000

Management (FMG): 1.000

Input (FI): 1.000

# Land Representation Manager (Tabs 1 and 2)

- Land Representation Manager allows to:
  - Stratify the territory in Regions, and assign to each the IPCC Approach applied for land representation (1 or 2 or 3)
  - Stratify the region in units of land homogeneous per current and historical land use, and assign to each the area and for each resident C pool, the IPCC method to be applied.

Land Representation Manager - Regions

Whole country area (ha): 6,000,000

Region name	Area (ha)	Approach	Remark
Region 1	1,000	Approach 1	
Region 2	2,000	Approach 2	
Region 3	3,000	Approach 3	
Total	6,000,000		

Define single region in case you wish to report for the whole country

Land Representation Manager - Land representation table

Region: Region 1 | Region area (ha): 10,000,000 | Discrepancy (ha): 1990: +9000; 1970: +9000 | Approach 1: 1990

Land use category	Area (1990) (ha)	Area (1970) (ha)	Remark
Forest Land	1000	1000

# Transfer of Area Data from Managers to Worksheets

- The compilation of data in **Land Representation Manager** allows the Software to populate area data of units of land in the relevant worksheets for each AFOLU category
  - This means that area data cannot be input directly into the worksheets. The AFOLU Managers need to be populated first
  - The transfer of units of land (and associated area) to the relevant worksheets is ruled by:
    - Current and Previous Land use category
    - Characterization of Land Type, as input in **Land Use Manager**
    - Land representation Approach, as selected in **Land Representation Manager**
    - Method to calculate C stock changes in each C pool as selected in **Land Representation Manager**
- ✓ *The sectoral guidebook for work with AFOLU worksheets is still under development*

# Guide to Land Representation

**5<sup>th</sup> level**

It shows the complete history of transitions of the unit of land relative to the current inventory year, ordered by year of transition descending and shown in grey (picture below).

Land and code (Inventory)	Land and code (Year entered)	Previous Land use Subcategory	Previous Land use Subcategory	Transition Period (Year)	Year of conversion	Area (ha)	Reason
U.S. 12.01.01, U.S. 12.01.02	U.S. 12.01.01, U.S. 12.01.02	Managed Forest Land	Managed Forest Land	Managed Forest Land	2002	1,124 gha	C
U.S. 12.01.01, U.S. 12.01.02	U.S. 12.01.01, U.S. 12.01.02	Managed Forest Land	Managed Forest Land	Managed Forest Land	1990	1,124 gha	C

Indeed, the Land unit conversion in a given point of time -i.e. the chosen inventory year- is automatically presented considering current status of land unit together with its history of transitions. For example, a unit of land experiences multiple conversions within the time period analyzed for inventory purposes. Note that although the inventory period is 1990-2022, the inventory compiler has analyzed a time series of data starting in 1971 -i.e. 1971-2022- because of the transition period applied is of 20 years. Then,

in 1975, the unit of land transition from *MGL/prairie organic rewetted inland* to *ACL/maize organic drained*

Land and code (Inventory)	Land and code (Year entered)	Previous Land use Subcategory	Previous Land use Subcategory	Transition Period (Year)	Year of conversion	Area (ha)	Reason
U.S. 12.01.01, U.S. 12.01.02	U.S. 12.01.01, U.S. 12.01.02	Managed Forest Land	Managed Forest Land	Managed Forest Land	2002	1,124 gha	C
U.S. 12.01.01, U.S. 12.01.02	U.S. 12.01.01, U.S. 12.01.02	Managed Forest Land	Managed Forest Land	Managed Forest Land	1990	1,124 gha	C

**Note:** this conversion occurred before the initial year of the inventory time series -i.e. 1990-2020; thus it is input in the year 1990

in 1983, the unit of land transition from *ACL/maize organic drained* to *MFL/Tectona grandis Planted Forest*

Land and code (Inventory)	Land and code (Year entered)	Previous Land use Subcategory	Previous Land use Subcategory	Transition Period (Year)	Year of conversion	Area (ha)	Reason
U.S. 12.01.01, U.S. 12.01.02	U.S. 12.01.01, U.S. 12.01.02	Managed Forest Land	Managed Forest Land	Managed Forest Land	2002	1,124 gha	C
U.S. 12.01.01, U.S. 12.01.02	U.S. 12.01.01, U.S. 12.01.02	Managed Forest Land	Managed Forest Land	Managed Forest Land	1990	1,124 gha	C

**Note:** this conversion occurred before the initial year of the inventory time series -i.e. 1990-2020; thus it is input in the year 1990

in 2002, the unit of land transition from *MFL/Tectona grandis Planted Forest* to *U.S./urban*

Land and code (Inventory)	Land and code (Year entered)	Previous Land use Subcategory	Previous Land use Subcategory	Transition Period (Year)	Year of conversion	Area (ha)	Reason
U.S. 12.01.01, U.S. 12.01.02	U.S. 12.01.01, U.S. 12.01.02	Managed Forest Land	Managed Forest Land	Managed Forest Land	2002	1,124 gha	C
U.S. 12.01.01, U.S. 12.01.02	U.S. 12.01.01, U.S. 12.01.02	Managed Forest Land	Managed Forest Land	Managed Forest Land	1990	1,124 gha	C

**Note:** this is the latest conversion of this unit of land and occurred in the inventory year visualized -i.e. Year of conversion = Inventory year = 2002-, thus the button "C" for intervening new conversion is NOT available.

- Guide to Land Representation explains all steps of data input into the Managers for units of land, which are used then for all 3.B categories and some of 3.C categories.
- Throughout the Guide, the text entered in **lilac color** represents information taken from the **Wetlands Supplement**.

# Conclusion

- IPCC TFI TSU is continuously working on the IPCC Inventory Software and supporting materials (Guidebooks) in order to meet users' needs as well as to respond to improvement of user-friendliness of the IPCC TFI products and rectification of any issues (bugs, errors, etc.)

We would appreciate users' feedback, which can be sent to us at:
