International Aviation (International Bunkers)												
International Water-borne Transport (International Bunkers)												
Multilateral Operations												

(1) CO₂ net emissions (emissions minus removals)(2) Total amount of CO₂ captured for long-term storage is to be reported separately for domestic storage and for export in the documentation box.(3) The other halogenated gases for which the CO₂ equivalent conversion factor is not available should not be included in this column. Such gases should be reported in the column 'Other halogenated gases without CO₂ equivalent conversion factors'.

(4) When this column is used, gases should be listed separately in IPPU Background Tables and Table 2.11 and the name of the gas should be given in the documentation box.

(5) Emissions that are not included in the national total should be reported as memo items.

* Cells to report emissions of NO_x, CO, NMVOC and SO₂ have not been shaded although the physical potential for emissions is lacking for some categories.**Documentation box:**

1A2l Textile and Leather																																
1A2m Non-specified Industry																																

(1) Although peat is not strictly speaking a fossil fuel, the CO₂ emissions from combustion of peat are included in the national emissions as for fossil fuels. See Chapter 1 of Energy Volume, page 1.15.

(2) Information items that are not themselves emissions, therefore not included in the national total. The carbon should be converted to carbon dioxide. It is subtracted in the CO₂ emission columns (net emissions). Only CO₂ captured for permanent storage in geological reservoirs should be subtracted.

(3) Enter the amount of CO₂ captured as a negative number since this amount is subtracted from total CO₂ produced.

(1) Although peat is not strictly speaking a fossil fuel, the CO₂ emissions from combustion of peat are included in the national emissions as for fossil fuels. See Chapter 1 of Energy Volume, page 1.15.

(2) To be reported as a memo item, and not part of the national inventory.

(3) Report the amount of urea-based additive used and its purity in the documentation box.

(4) Emissions that are not included in the national total should be reported as memo items.

(5) Multilateral operations pursuant to the Charter of the United Nations: including emissions from fuel delivered to the military in the country and delivered to the military of other countries.

1B2biii Others							
1B2bvii Abandoned gas wells	number of abandoned gas wells	number					
1B3 Other Emissions from Energy Production							

(1) The units given here are the most commonly used for respective activity data. For convenience and/or consistency, they can be converted into appropriate energy units.

(2) The amount of CO₂ captured is given for information purposes; it is subtracted in the CO₂ emission columns (net emissions).

Documentation box:

Table 1.4a Energy Background Table: 1C CO₂ Transport, Injection and Storage (Unchanged)

Category	Activity (Gg)		Annual mass of fugitive CO ₂ emissions to the atmosphere or sea bed (Gg) ⁽²⁾
	Annual mass of CO ₂ transported	Annual mass of CO ₂ injected ⁽¹⁾	
1C1 Transport of CO₂			
1C1a Pipelines			
1C1b Ships			
1C1c Other (please specify)			
1C2 Injection and Storage ⁽³⁾			
1C2a Injection			
1C2b Storage			
1C3 Other			

(1) Excluding recycled CO₂ for enhanced recovery.

(2) Corrected for baseline background fluxes.

(3) Fugitive emissions during above ground operations such as processing and CO₂ recycling during enhanced oil and gas recovery operations should be reported as fugitive emissions from oil and natural gas and reported under the appropriate categories for that sector.

Table 1.4b Energy Background Table: 1C CO₂ Transport, Injection and Storage – Overview (Unchanged)

Category ⁽¹⁾	CO ₂ (Gg)
Total amount captured for storage (A)	
Total amount of import for storage (B)	
Total amount of export for storage (C)	
Total amount of CO ₂ injected at storage sites (D)	
Total amount of leakage during transport (E1) category 1C1	
Total amount of leakage during injection (E2) category 1C2a	
Total amount of leakage from storage sites (E3) category 1C2b	
Total leakage (E4 = E1 + E2 + E3))	
Capture + imports (F = A + B)	
Injection + leakage + exports (G = D + E4 + C)	
Discrepancy (F – G)	

(1) Once captured, there is no differentiated treatment between biogenic carbon and fossil carbon. Emissions and storage of both biogenic and fossil carbons will be estimated and reported.

(1) The other halogenated gases for which the CO₂ equivalent conversion factor is not available should not be included in this column. Such gases should be reported in the column "Other halogenated gases without CO₂ equivalent conversion factors".

(2) When this column is used, gases should be listed separately (in IPPU background tables and Table 2.11) and the name of the gas should be given in the documentation box. Insert additional columns if necessary.

(3) Insert additional rows if needed

(4) The "Other halogenated gases" are fluorinated alcohols, fluorinated ethers, NF₃, SF₆CF₃.

(5) Small amounts of CO₂ used as a diluent for SF₆ and emitted during magnesium processing is considered insignificant and is usually counted elsewhere. The "Other halogenated gases" here mainly comprise fluorinated ketones.

(6) Emissions from feedstock uses in petrochemical industry should be addressed in 2B8 (Petrochemical and Carbon Black Production). Emissions from some product uses should be allocated to each industry source category (e.g., CO₂ from carbon anodes and electrodes → 2C (Metal Industry)).

(7) Only NMVOC emissions and no direct GHGs are relevant to this category.

(8) Emissions from asphalt production, and paving of roads and roofing are included here.

(9) "Other halogenated gases" are NF₃, c-C₄F₈O, etc.

(10) The "Other halogenated gases" here include C₄F₉OC₂H₅ (HFE-7200), CHF₂OCF₂OC₂F₄OCHF₂ (H-Galden 1040x), CHF₂OCF₂OCHF₂ (HG-10), etc.

* Cells to report emissions of NO_x, CO, NMVOC and SO₂ have not been shaded although the physical potential for emissions is lacking for some categories.

2G4 Other (please specify) ^{(5), (6)}												

(1) Typically, global warming potential (100 year time horizon) identified in the IPCC Assessment Report can be used. The source of the factors must be specified in the bracket.

(2) Insert additional columns if necessary. The other halogenated gases for which the CO₂ equivalent conversion factor is not available should not be included in this table. Such gases should be reported in Table 2.11 IPPU background table: Greenhouse gases without CO₂ equivalent conversion factors.

(3) Enter the reported emissions (adjusted with captured and/or reduced amount).

(4) Enter the quantities of reduction of generated gas (emission recovery, destruction, etc.)

(5) Insert additional rows if necessary.

(6) If HFCs with CO₂ equivalent conversion factor are estimated, include them in the column for "Other halogenated gases".

Note: Where information is confidential the entries should provide aggregate figures but there should be a note indicating this in the documentation box below.

Table 2.12 IPPU Background Table: Allocation of CO₂ emissions from Non-Energy Use of fossil fuels: IPPU and other sectors [See also section 1.4 of Volume 3.] (Updated)

Category	Reported in year:				Notes
	Primary NEU fuel ⁽¹⁾	Other NEU fuel(s) ⁽¹⁾	Emissions Amount Reported in IPPU Sector CO ₂ ⁽²⁾ (Gg)	In case reported elsewhere: Sub-category in 1A where these emissions are (partly) reported	
2 Industrial Processes and Product Use					
2A Mineral Industry					
(Please specify the sub-category)	(coal, ..)				4
2B Chemical Industry					
2B1 Ammonia Production	natural gas	oil, coal			
2B5 Carbide Production	pet coke	oil			
2B6 Titanium Dioxide Production	coal				
2B8 Petrochemical and Carbon Black Production					
2B8a Methanol	natural gas	coal, oil			5
2B8b Ethylene	naphtha	gas oil; butane, ethane, propane, LPG			5
2B8f Carbon Black	natural gas	oil, coke oven gas			
2B10 Hydrogen Production	natural gas	LPG, naphtha, coal, methanol, biomass and waste			
2B11 Other					
2C Metal Industry					
2C1 Iron and Steel Production	coke	coal, pet coke (carbon electrode)			6
2C2 Ferroalloys Production	(carbon electrode)	coke, coal			7
2C3 Aluminium Production	(carbon electrode)	coke, coal			7
2C5 Lead Production	coke				
2C6 Zinc Production	coke				
2C7 Other	(carbon electrode)	coke, coal			
2D Non-Energy Products from Fuels and Solvent Use					
2D1 Lubricant Use	lubricants	greases			
2D2 Paraffin Wax Use	waxes				
2D3 Solvent Use	(mineral turpentine)	coal tars and oils			8
2D4 Other					9
2H Other					
2H1 Pulp and Paper Industry					
2H2 Food and Beverages Industry	coke				
2H3 Other					
1 ENERGY					
1A Fuel Combustion Activities			Reported in Sector 1A ⁽³⁾		
1A1a Main Activity Electricity and Heat Production	(BF gas)	(chemical off-gases)			10
1A1b Petroleum Refining					
1A1c Manufacture of Solid Fuels and Other Energy Industries	BF gas				
1A2 Manufacturing Industries and Construction	(BF gas)	(lubricants, chemical off-gases))			

- (1) The columns 'Primary NEU fuel' and 'Other NEU fuel' should be completed with the actual fuel types used.
- (2) These are the same emissions reported in the sectoral background table (also the same emissions notation keys NE, NO, IE, where applicable). If (partly) reported elsewhere, a reference to that other source category should be added in the next column.
- (3) Report here only the CO₂ emissions from combustion of waste gases produced from industrial processes but used for fuel combustion in other economic sectors and reported in the Energy sector. (e.g. from combustion of blast furnace gas or chemical off-gases transferred offsite to another source category).
- (4) For example, powdered anthracite coal may be used in Glass Production (2A3).
- (5) In cases where the production of off-gases (i.e. byproduct gases) is fully accounted for in the energy statistics, the combustion of these gases may be used to calculate and report CO₂ emissions from the feedstock losses. Part of these off-gases may be combusted off-site (i.e. in a sector other than the petrochemical industry) and should thus be accounted for separately as fuel combustion in the Energy Sector.
- (6) Part of the blast furnace gas produced from coke used in blast furnaces may be combusted off-site (i.e. in a sector other than the iron and steel industry) and should thus be accounted for separately as fuel combustion in the Energy Sector.
- (7) Carbon electrodes are generally manufactured from coke, coal or tar either on-site by the users themselves or separately by anode production plants and then sold to users domestically and/or exported. If anodes are also imported and/or

exported, there is no direct correspondence between fuels used for anode production and the amounts of anodes used in the country.

(8) Mineral turpentine is often used as solvent, possibly blended with other liquids. Aromatics derived from coal oils may also be used as solvents.

(9) Emissions from asphalt production, paving of roads and roofing should be reported under 2D4. However, bitumen - and other oil as diluent or 'road oil' - used for this activity does not result in CO₂ emissions.

(10) CO₂ from blast furnace gas and chemical off-gases should be reported here only when utilised in public power or heat production.

- (1) Where the carbon contained in the emissions of CH₄ and CO is significant part of the sectoral emissions, this should be copied from the corresponding columns in the Sectoral Background Table 3.4. This amount of carbon emitted as CH₄ and CO is then subtracted from carbon stock change to avoid double counting (see Volume 4, Section 2.2.3).
- (2) The activity data used for this column correspond to the difference between the column Area and the Area of organic soils.
- (3) CO₂ Emissions from Wetlands are reported in a separate background table (Table 3.3) that includes all gases emitted from Wetlands.

Table 3.4 AFOLU Background Table: Biomass Burning (3C1) (2 of 2) (Unchanged)

Categories ⁽¹⁾	Activity data			Emissions							Information item: Carbon emitted as CH ₄ and CO ⁽⁵⁾	
	Description ⁽²⁾	Unit	Values	CO ₂ ⁽³⁾	CH ₄ ⁽⁴⁾		N ₂ O	CO ⁽⁴⁾		NO _x	Biomass	DOM
					Biomass	DOM		Biomass	DOM			
			(ha or kg dm)		(Gg)							(C Gg)
Biomass Burning in Forest Land Converted to All Other Land												
Controlled Burning												
Wildfires												
Biomass Burning in Non Forest Land Converted to All Other Land												
Controlled Burning												
Wildfires												

(1) Parties should report both Controlled/Prescribed Burning and Wildfires emissions, where appropriate, in a separate manner.

(2) For each land type data should be selected between area burned or biomass burned. Units for area will be in hectare (ha) and for biomass burned in kilogram dry matter (kg dm).

(3) If CO₂ emissions from biomass burning are not already included in Table 3.2 (Carbon stock changes background table), they should be reported here. Carbon stock changes associated with biomass burning should not also be reported in Table 3.2 to avoid double counting.

(4) CH₄ and CO emissions from biomass burning and DOM are reported separately.

(5) Where the carbon contained in the emissions of CH₄ and CO is a significant part of the sectoral emissions this should be transferred to the corresponding columns in the Sectoral Background Table 3.2. This amount of carbon emitted as CH₄ and CO is then subtracted from carbon stock change to avoid double counting. The conversion factors to convert CH₄ and CO to C (as input to Table 3.2) are 12/16 for CH₄ and 12/28 for CO. (see Volume 4, Section 2.2.3).

Inventory year	Annual Change in stock of HWP in use from consumption	Annual Change in stock of HWP in SWDS from consumption	Annual Change in stock of HWP in use produced from domestic harvest	Annual Change in stock of HWP in SWDS produced from domestic harvest	Annual Imports of wood, and paper products + wood fuel, pulp, recovered paper, roundwood/ chips	Annual Exports of wood, and paper products + wood fuel, pulp, recovered paper, roundwood/ chips	Annual Domestic Harvest	Annual release of carbon to the atmosphere from HWP consumption (from fuelwood & products in use and products in SWDS)	Annual release of carbon to the atmosphere from HWP (including fuelwood) where wood came from domestic harvest (from products in use and products in SWDS)	HWP Contribution to AFOLU CO ₂ emissions/ removals	Approach used to estimate HWP Contribution
	$\Delta C_{HWP\ IU\ DC}$	$\Delta C_{HWP\ SWDS\ DC}$	$\Delta C_{HWP\ IU\ DH}$	$\Delta C_{HWP\ SWDS\ DH}$	P_{IM}	P_{EX}	H	$\uparrow C_{HWP\ DC}$	$\uparrow C_{HWP\ DH}$		
	Gg C /yr									Gg CO ₂ /yr	
1990											
.....											
Report Col 6 or 7 as needed for the approach used. Col 6 or 7 may be computed using Cols 1 through 5 or by a Tier 3 method. Always report Cols 3, 4, and 5. Report Cols 1A, 1B, 2A, 2B if they are used.											
The HWP contribution and approach should be reported in Columns 8 and 9 together with a description of the approach chosen and main assumptions in the Documentation Box											
Additional Variables calculated and used should be reported to enhance the transparency of the results. (e.g., CH ₄ from SWDS if this was used) Add additional columns if needed.											
Note: $\uparrow C_{HWP\ DC} = H + P_{IM} - P_{EX} - \Delta C_{HWP\ IU\ DC} - \Delta C_{HWP\ SWDS\ DC}$ AND $\uparrow C_{HWP\ DH} = H - \Delta C_{HWP\ IU\ DH} - \Delta C_{HWP\ SWDS\ DH}$

Table 4 Waste Sectoral Table (Unchanged)

Categories	CO ₂	CH ₄	N ₂ O	NO _x	CO	NMVOC ⁽¹⁾	SO ₂
	(Gg)						
4 WASTE							
4A Solid Waste Disposal							
4A1 Managed Waste Disposal Sites							
4A2 Unmanaged Waste Disposal Sites							
4A3 Uncategorised Waste Disposal Sites							
4B Biological Treatment of Solid Waste							
4C Incineration and Open Burning of Waste							
4C1 Waste Incineration							
4C2 Open Burning of Waste							
4D Wastewater Treatment and Discharge							
4D1 Domestic Wastewater Treatment and Discharge							
4D2 Industrial Wastewater Treatment and Discharge							
4E Other (please specify) ⁽²⁾							

(1) Countries may wish to report emissions of NMVOCs from waste disposal sites and waste water treatment.

(2) Insert additional rows if necessary.

* Cells to report emissions of NO_x, CO, NMVOC and SO₂ have not been shaded although the physical potential for emissions is lacking for some categories.

Documentation box:

Table 4.1 Waste Background Table: CO₂, CH₄, N₂O emissions (Updated)

Categories	Type of activity data	unit	Emission factor			Emissions		
			CO ₂	CH ₄	N ₂ O	CO ₂	CH ₄	N ₂ O
			(Gg/unit activity data)			(Gg)		
4A Solid Waste Disposal ⁽¹⁾								
4A1 Managed Waste Disposal Sites								
4A2 Unmanaged Waste Disposal Sites								
4A3 Uncategorised Waste Disposal Sites								
4B Biological Treatment of Solid Waste								
4C Incineration and Open Burning of Waste ⁽²⁾								
4C1 Waste Incineration								
4C2 Open Burning of Waste								
4D Wastewater Treatment and Discharge								
4D1 Domestic Wastewater Treatment and Discharge								
CH ₄ emissions ⁽³⁾								
N ₂ O emissions ⁽⁴⁾								
4D2 Industrial Wastewater Treatment and Discharge								
CH ₄ emissions ⁽³⁾								
N ₂ O emissions ⁽⁴⁾								
4E Other (please specify) ⁽⁵⁾								

(1) Amount of waste deposited in the SWDS in the inventory year. [mil. tonnes of wet waste/yr] Specification by waste type is encouraged. Emission factor data (parameters used in the calculations) should be reported in FOD parameter sheet or reported separately, when other methods are used.

(2) Waste burned for energy is reported in the Energy Sector under 1A. Information on reporting of waste combustion in the Energy Sector should be given in the documentation box.

(3) Activity data for estimation of CH₄ emissions is total amount of organically degradable material in the wastewater (TOW) [Gg BOD/yr or Gg COD/yr].

(4) Activity data for estimation of N₂O emissions is total amount of nitrogen in wastewater (TN) [Gg N/yr] and total amount of nitrogen in effluent (N_{EFFLUENT}) [Gg N/yr]

(5) Insert additional rows if necessary.

Table 4.2 Waste Background Table: CH₄ recovery ^{(1) (2)} (Unchanged)

Categories	Unit	CH ₄	
	Gg CH ₄	Flared ⁽³⁾	Energy recovery ⁽⁴⁾
4A Solid Waste Disposal			
4B Biological Treatment of Solid Waste			
4D Wastewater Treatment and Discharge			
4D1 Domestic Wastewater Treatment and Discharge			
4D2 Industrial Wastewater Treatment and Discharge			
4E Other (please specify) ⁽⁵⁾			

(1) The amount of CH₄ recovery should be reported in this table even if the gas is used for energy.

(2) Flaring and energy recovery should be reported separately, if possible.

(3) Default EF for CH₄ and N₂O from flaring is zero. The CO₂ emissions are not reported as the gas is of biogenic origin.

(4) When CH₄ recovered is used for energy, the emissions from the combustion of the gas should be reported in the Energy sector (under 1A).

Default EF for CH₄ and N₂O from the combustion of the gas is zero.

(5) Insert additional rows if necessary.

Documentation box:

Table 4.3 Waste Background Table: Long-term storage of carbon Information items (Unchanged)

Categories	C ⁽¹⁾
	(Gg)
Information items ⁽²⁾	
Long-term storage of carbon in waste disposal sites	
Annual change in total long-term storage of carbon stored	
Annual change in long-term storage of carbon in HWP waste ⁽³⁾	

(1) Report in mass carbon.

(2) These items are listed for information only and will not be added to the totals. The carbon should be converted to carbon dioxide.

(3) Carbon stored in wood, paper, cardboard, garden (yard) and park (equal to the annual change in stock of HWP in SWDS from consumption, reported in Table 3.10, Column 1B).

Final Draft

Table 5A Cross-sectoral Table: Indirect emissions of N₂O ⁽¹⁾⁽²⁾ (Unchanged)

Categories	Activity data / source emissions		Emissions
	Emissions NH ₃	Emissions NO _x	N ₂ O
	(Gg NH ₃)	(Gg NO ₂ -equivalents)	(Gg N ₂ O)
1 Energy			
2 Industrial Processes and Product Use			
3 Agriculture, Forestry and Other Land Use			
3C5 Indirect N ₂ O Emissions from managed soils			
3C6 Indirect N ₂ O Emissions from manure management			
Other ⁽³⁾ (Please specify)			
4 Waste			
5 Other (Please specify) ⁽⁴⁾			

- (1) 90 to 99 percent of ammonia emissions originate in the Agriculture Sector. Other emission sources for ammonia are in the Energy Sector (such as combustion, petroleum refining, catalyst cars in the transport sector), in the Industrial processes sector in particular from production of ammonia, nitric acid, ammonium nitrate and phosphate, urea, and fertilizers), and from metal industry (coke ovens battery operations), and also in the Waste Sector (solid waste disposal and waste incineration).
- (2) Indirect N₂O emissions from nitrogen leaching /runoff from managed soils in AFOLU categories are included in Table 3.8.
- (3) Any other sources not included in 3C5 and 3C6.
- (4) Insert additional rows if necessary.

Table 7B Summary of Key Category analysis (Unchanged)

Quantitative method used: Approach 1/Approach 1 and Approach 2

IPCC Category Code	IPCC Category	Greenhouse Gas	Identification criteria ⁽¹⁾	Comments ⁽²⁾

(1) The notation keys to be used for this column:

L1 = key category according to Approach 1 Level Assessment

L2 = key category according to Approach 2 Level Assessment

T1 = key category according to Approach 1 Trend Assessment

T2 = key category according to Approach 2 Trend Assessment

Q = key category according to qualitative criteria

(2) In the column for comments, reasons for a qualitative assessment can be provided.
