EVOLUTION OF MALAYSIA'S EXPERIENCE USING THE SOFTWARE

**First used in
Malaysia's
BUR1 (2015)**

**Ongoing
work in
Malaysia's
First BTR
(BTR1)**

*Software current version used: 2.92

- The IPCC Inventory Software was used to generate the GHG inventory estimates. External spreadsheets as provided in the 2006 IPCC Guidelines were also created as a check on the calculations from the software.

WORK PROCESS FLOW

Inventory Compilers (members of GHG Inventory Technical Working Group) to fill in appropriate inventory data in IPCC Inventory Software

Sector Coordinator/ Secretariat (within Ministry of Natural Resources and Environmental Sustainability - NRES) has internal checks of outputs produced from the software

Inventory Compilers + Sector Coordinator/ Secretariat has a final check on the output of the software with the Chair of the GHG Inventory TWG

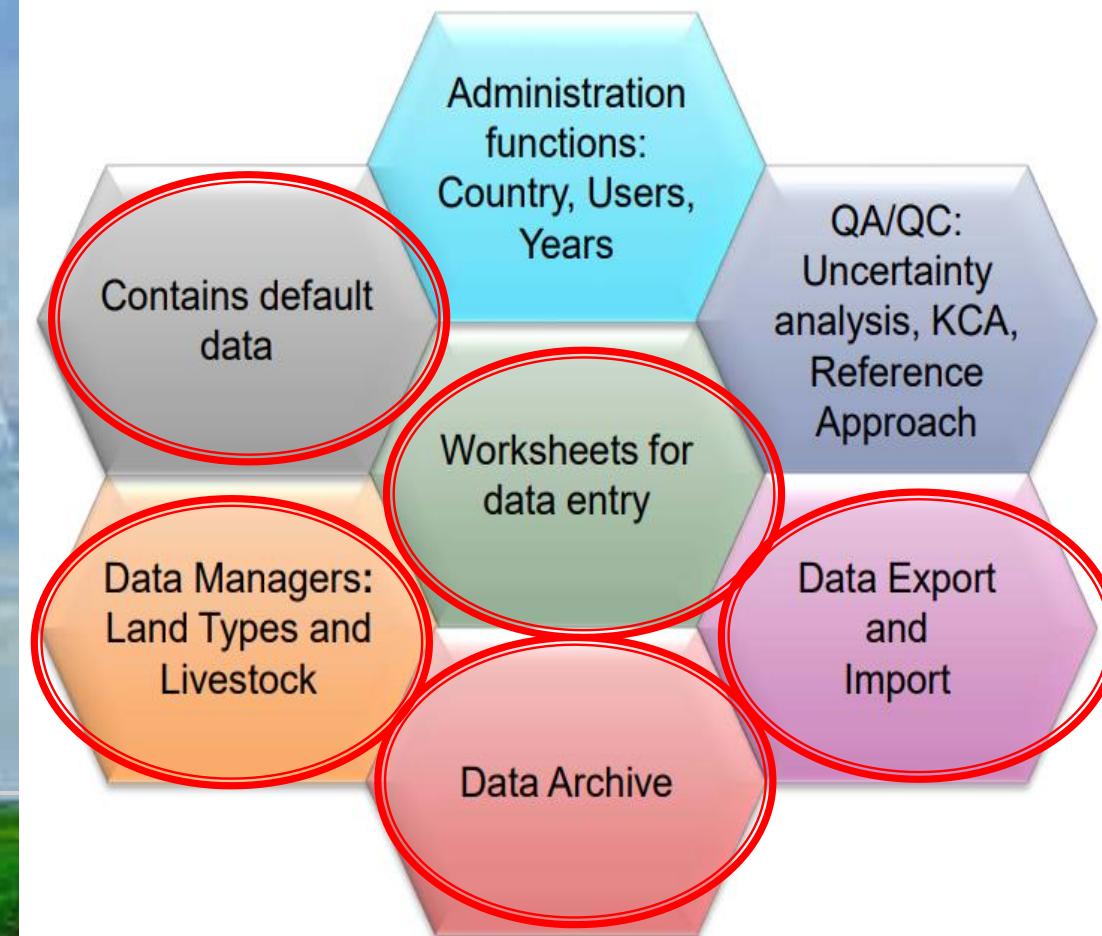

Agreement on software version through the GHG Inventory Technical Working Group (TWG)

CURRENT ADDITIONAL STEPS IN BTR1

SOFTWARE FUNCTIONS USED BY MALAYSIA

History Agri User

- ▶ Earlier than 2017 if not mistaken
 - ▶ ALU and IPCC (training)
- ▶ Frequently used by energy sector and agri for sectoral reporting
- ▶ Mainly for counter checking calculation and completeness
 - ▶ Align with the IPCC 2006
 - ▶ Inventory software- seasonal use

Challenges

- ▶ Software mainly 1 person use / manager (sector)
- ▶ Capacity building- Expertise within sector, subsector, expertise in each sub sector?>>> Retaining expertise and the need for continuous capacity-building
- ▶ Loss of expertise (shift/transfer etc)
- ▶ Lack of expertise within focal agency / country
- ▶ Upgrading- major changes (2.69-2.8 and above)- multiple headaches
- ▶ Latest 2.93 released 18 August- sectoral writing phase!
- ▶ Cross cutting sector- compiling
- ▶ Multiple upgrading

Challenges

- Cross-cutting – JSON file to ETF Tools
- Sectoral
 - IPPU – Issues on the key in of f-gasses
 - Energy – Issues on the key in of transportation category
 - Agriculture – xxx
 - LULUCF - xxx
 - Waste - xxx

Newer version after 2.69

- ▶ NAPA
- ▶ Super user> user
- ▶ Sector user AD work frame
- ▶ More detail, more complicated, but becomes easier when used to the system
- ▶ Only things is, how often using it, not focused to inventory work

Moving /way foward

- ▶ Further capacity-building required to ensure seamless & consistent usage of IPCC software
 - Series of training- basic to advance
 - Capacity building by sector and cross cutting
- ▶ Exploring additional features of the IPCC software such as QA/QC process (uncertainty assessment & KCA)
- ▶ Online helpdesk, virtual to assist. Till now json file not solved.

THANK
YOU

TƏŞƏKKÜR
EDİRƏM
